Characteristics

Remark: Reference level for the relative attenuation a_{rel} of the TFS 125G is the attenuation at 125 MHz. Reference for the echo response attenuation is the main time response lobe, the reference time is defined as t_0 . The nominal frequency f_N is fixed at 125 MHz without tolerance. The given values for the relative attenuation a_{rel} and for the group delay ripple have to be reached at the frequencies given below even if the centre frequency f_C is shifted due to the temperature coefficient of frequency TC_f in the operating temperature range and due to a production tolerance for the centre frequency f_C .
