

# Fixed Attenuators

## Series 081

### Features

- Full Waveguide Band
- Low Frequency Sensitivity

The fixed attenuators, series 081, are low VSWR devices suitable for operating over the full waveguide band.

For most models the variation of attenuation with frequency, over the operational frequency range, is typically 10% of the nominal attenuation value.

Standard models are available in a range of attenuation values from 3 dB to 30 dB. Units with attenuation values of 40 dB and 50 dB are available to special order. Higher attenuation values can also be accommodated - details on request.

### Specifications:

Attenuation sensitivity (dB) over the operational frequency range - 10% of nominal attenuation value.
