

High Performance Amplifier, 10 dB Gain 5 - 500 MHz

Rev. V5

Features

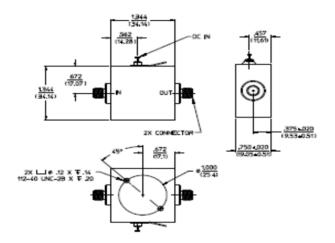

- 3.5 dB Mid-band Noise Figure
- · 42 dBm Mid-band Intercept

Description

The AM-123 is a coupler feedback amplifier with high intercept and compression points. The use of coupler feedback minimizes noise figure and current in a high intercept amplifier. This amplifier is packaged in a TO-8 package. Due to the internal power dissipation the thermal rise minimized. The ground plane on the PC board should be configured to remove heat from under the package.

AM-123 is ideally suited for use where a high intercept, high reliability amplifier is required.

Exceeding any one or combination of these limits may cause permanent damage to this device.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

^{2.} Heat Sinking: Operation at case temperature above 95°C is not recommended. Heat sinking adequate to dissipate 1 W must be provided in use.

MACOM does not recommend sustained operation near these survivability limits.
