

24-30GHz Integrated Down Converter

GaAs Monolithic Microwave IC

Description

The CHR2295 is a multifunction chip which integrates a LO time two multiplier, a balanced cold FET mixer, and a RF LNA. It is designed for a wide range of applications, typically commercial communication systems. The backside of the chip is both RF and DC grounds. This helps simplify the assembly process.

The circuit is manufactured with a pHEMT process, 0.25 μ m gate length, via holes through the substrate, air bridges and electron beam gate lithography. It is available in chip form.

Typical On-wafer Measurements

Bias Conditions : $V_{dm} = V_{dl} = 3.5V$, $V_{gm} = -0.9V$, $V_{gb} = -0.3V$, $V_{gx} = -0.7V$, $V_{ga} = -0.2V$

Input RF compression by channel

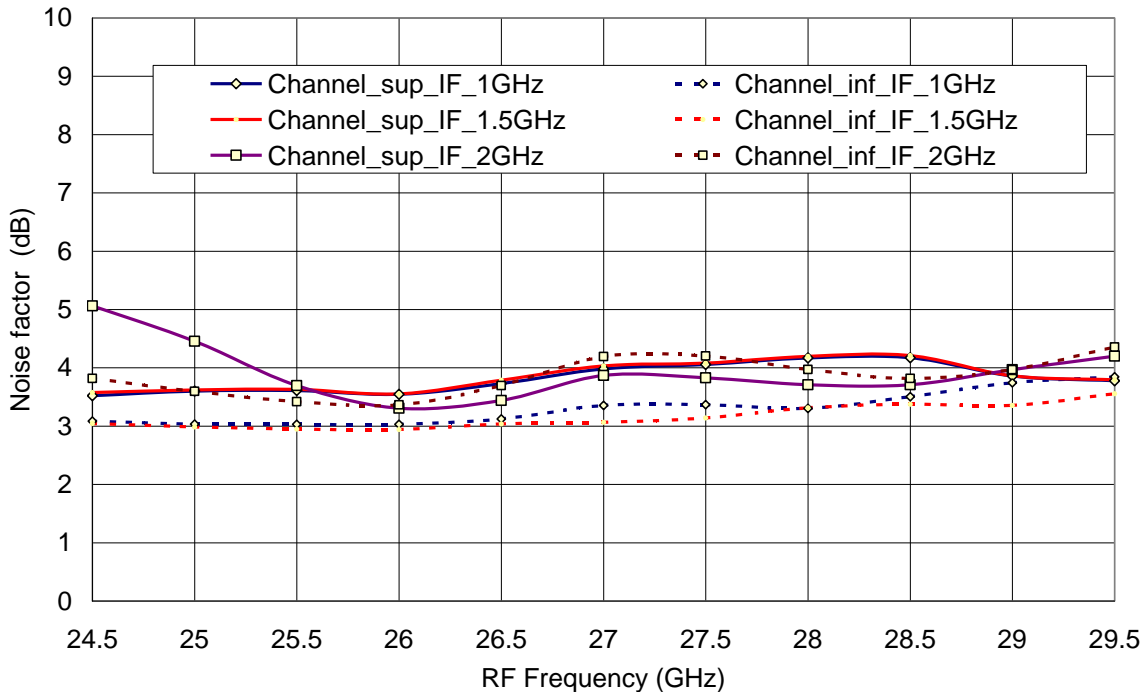

Typical On-board Measurements

Bias Conditions : $V_{dm} = V_{dl} = 3.5V$, $V_{gm} = V_{gx} = -0.9V$, $V_{gb} = V_{ga} = -0.3V$

All these measurements include the losses from the test board (typically 1dB for the conversion gain and 0.5dB for the Noise Figure).
