

DC to 3500 MHz, CASCADABLE SiGe HBT MMIC AMPLIFIER

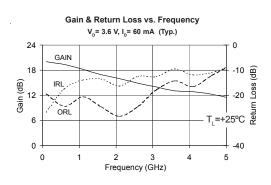

Package: SOT-86

The SGA5486Z is a high performance SiGe HBT MMIC Amplifier. A Darlington configuration featuring one-micron emitters provides high F_T and excellent thermal performance. The heterojunction increases breakdown voltage and minimizes leakage current between junctions. Cancellation of emitter junction non-linearities results in higher suppression of intermodulation products. Only two DC-blocking capacitors, a bias resistor, and an optional RF choke are required for operation.

Absolute Maximum Ratings

Parameter	Rating	Unit
Max Device Current (I _D)	120	mA
Max Device Voltage (V _D)	5	V
Max RF Input Power	+16	dBm
Max Junction Temp (T _J)	+150	°C
Operating Temp Range (T _L)	-40 to +85	°C

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation, the device voltage and current must not exceed the maximum operating values specified in the table on page one.

Bias Conditions should also satisfy the following expression:

 $I_DV_D < (T_J - T_L) / R_{TH}, j-I$

Caution! ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

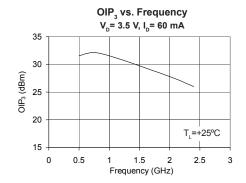

RoHS status based on EUDirective 2002/95/EC (at time of this document revision).

Pin	Function	Description
1	RF IN	RF input pin. This pin requires the use of an external DC blocking capacitor chosen for the frequency of operation.
2, 4	GND	Connection to ground. For optimum RF performance, use via holes as close to ground leads as possible to reduce lead inductance.
3	RF OUT/BIAS	RF output and bias pin. DC voltage is present on this pin, therefore a DC blocking capacitor is necessary for proper operation.
