### Product Overview

The Mini-Circuits ZVBP-909+ slabline filter offering outstanding close-in rejections for use in CDMA and GSM base stations.

### Key Features

Feature	Advantages
Ultra-High Rejection Close to the Passband	Using slabline resonators, the ZVBP-909+ provides more than 70 dB rejection at only 32 MHz away from the passband of 902 to 915 MHz
Narrow Percent Bandwidth	The ZVBP-909+ design has been optimized to support 1dB passbandwidths down to 1.4% making this design ideal for high selectivity applications such as radio communications with stringent interfering blocking signals
Low Passband Insertion Loss for Ultra Narrow Filter	The ZVBP-909+ combines excellent insertion loss with narrow percent bandwidth operation. Employing a multi-section design to achieve the extremely close rejection, this filter maintains low passband insertion loss due to its unique resonator design.
Low Passband VSWR	ZVBP-909+ maintains typical VSWR of 1.2:1 making it easier to integrate into receiver and transmitter RF chains with less concerns for in-band ripple.
Wide Operating Temperature Range with Excellent Temperature Stability	Operating over an extended temperature range of -55 to +100°C, the ZVBP-909+ supports ±0.4dB passband insertion loss variation over the full range
Good Power Handling capability	Handling up to 15W CW within the passband, the ZVBP-909+ is ideally used in both TX and RX chains
