# Stratum 3E High Stability Oven Stabilized Oscillator OH200-Series

OCXO / VCOCXO

# CONNOR WINFIELD

## Description

Connor-Winfield's high stability OH200-series are exceptionally precise frequency standards, excellent for use in cellular base stations, test equipment, Synchronous Ethernet, VSAT and Stratum 3E applications

These unique OCXO / VCOCXO oscillator products provide temperature stabilities in the range of  $\pm 3$  ppb to  $\pm 25$  ppb, over the commercial, extended commercial or the industrial temperature range. Power requirements are 3W over the commercial temperature range and 4.5W over the industrial temperature range. Additionally, excellent aging is achieved through the use of overtone SC cut crystals.

The OH200 series is available with CMOS logic or Sinewave output along with Voltage Controlled option. These oscillators provide outstanding phase noise that varies depending on frequency. Frequencies are available from 5.0 to 40.0 MHz. Allan Variance specifications are rated for primary reference standards. Warm up times are on the order of 5 minutes to 0.10 ppm of final frequency.

### Notes:

1. Frequency stability vs. change in temperature  $[\pm(F_{max}-F_{min})/(2 \cdot F_o)]$ .
2. At time of shipment after 48 hours of operation.
3. Inclusive of calibration, operating temperature, supply voltage change, load change and 20 years aging.
4. Supply voltage must reach Vcc levels monotonically within a ramp-up time of <12 ms.
5. Measured with Vcc = Nominal, in calm air.
6. Measured @ 25°C, within 5 minutes, referenced one hour after turn-on.
7. To ensure proper operation of VCOCXO, the control voltage input must be biased the nominal control voltage. Failure to bias the Vc input will cause an unstable output condition.
