## Simplified Schematic

The DAT-3175-PP Parallel interface consists of 5 control bits that select the desired attenuation state, as shown in **Table 1: Truth Table**

Attenuation State	C16	C8	C4	C2	C1
Reference	0	0	0	0	0
1 (dB)	0	0	0	0	1
2 (dB)	0	0	0	1	0
4 (dB)	0	0	1	0	0
8 (dB)	0	1	0	0	0
16 (dB)	1	0	0	0	0
31 (dB)	1	1	1	1	1

Note: Not all 32 possible combinations of C1 - C16 are shown in table

The parallel interface timing requirements are defined by **Figure 1** (Parallel Interface Timing Diagram) and **Table 2** (Parallel Interface AC Characteristics), and switching speed.

For latched parallel programming the Latch Enable (LE) should be held LOW while changing attenuation state control values, then pulse LE HIGH to LOW (per Figure 1) to latch new attenuation state into device.

For direct parallel programming, the Latch Enable (LE) line should be pulled HIGH. Changing attenuation state control values will change device state to new attenuation. Direct mode is ideal for manual control of the device (using hardware, switches, or jumpers).

**Figure 1: Parallel Interface Timing Diagram**

Symbol	Parameter	Min.	Max.	Units
$t_{LEPW}$	LE minimum pulse width	10		ns
$t_{PDSUP}$	Data set-up time before clock rising edge of LE	10		ns
$t_{PDHL}$	Data hold time after clock falling edge of LE	10		ns

Pin 20 must always be low to prevent the attenuator from entering an unknown state.

## Power-up Control Settings

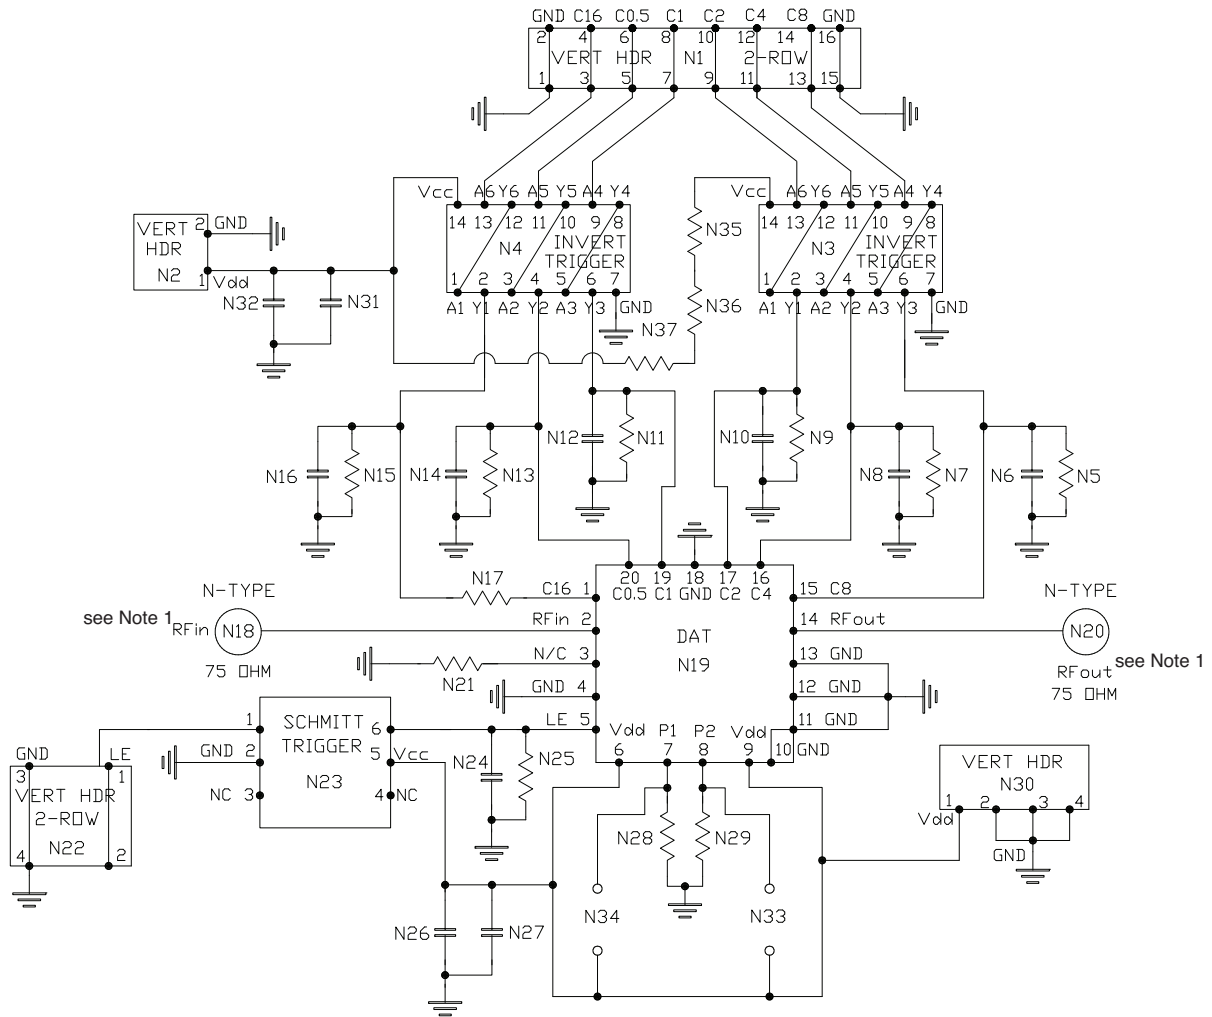

The DAT-3175-PP always assumes a specifiable attenuation setting on power-up, allowing a known attenuation state to be established before an initial parallel control word is provided.

When the attenuator powers up with LE=0, the control bits are automatically set to one of four possible values. These four values are selected by the two power-up control bits, PUP1 and PUP2, as shown in table 3: (Power-Up Truth Table, Parallel Mode).

Table 3. Power-Up Truth Table, Parallel Mode			
Attenuation State	PUP1	PUP2	LE
Reference	0	0	0
8 (dB)	0	1	0
16 (dB)	1	0	0
31 (dB)	1	1	0
Defined by C1-C16 (See Table 1-Truth Table)	X (Note 1)	X (Note 1)	1
Note: PUP1 and PUP2 Connection may be 0, 1, GROUND, or not connect, without effect on attenuation state.			

Power-Up with LE=1 provides normal parallel operation with C1-C16, and PUP1 and PUP2 are not active.
